

CARE INSTRUCTIONS - HARD

SHOES

- Bike shoes do not belong in the washing machine.
- Before cleaning, remove the insole and laces or loosen all straps and buckles.
- Dust or light dirt can simply be wiped off with a moist cloth.
- For coarser dirt use a soft nylon brush and water.
- Shoes made of real leather need special care: Use suitable shoe care for leather to grease them regularly. Never leave your shoes damp and unventilated, e.g. in the trunk of the car, and always keep them away from heat sources (heaters, ovens), as the leather can become brittle, dry, and cracked or, in the worst case, deform.
- Stuff your shoes with newspaper to dry them and do not leave them to dry directly in the sun or in a heat source.
- Waterproof your shoes regularly – preferably after cleaning, when they are not yet completely dry.

BACKPACKS

- Do not wash backpacks in the washing machine.
- Dust or light dirt can simply be wiped off with a damp cloth.
- Coarser dirt can be removed with warm water or soaked in a water bath if necessary.
- Do not use aggressive detergents to avoid destroying the coating. pH-neutral soap or shower gel is best.
- Squeeze foam parts in the water to remove salt marks.
- Allow your backpack to air dry.
- Waterproof your backpack regularly – best after cleaning, when it is not yet completely dry.

GLOVES

- Specific cleaning instructions are included with each product. Please read them before washing.
- Close all Velcro fasteners before washing.
- Wash the gloves in a laundry net.
- Never machine wash gloves with real leather. You can clean them by hand with a soft brush. On top of that you should treat the leather with special leather care products.

PROTECTION

- After each use, allow your body armor to air out and dry well.
- There are specific cleaning instructions with each product. Please read them before washing.
- Before washing, check if the pads can be removed. If so, do not machine wash them.
- Allow your protectors to dry in the air and under no circumstances in the dryer.
